

# Software House Level CSS Screening Test (2026 Edition)

Student Name: \_\_\_\_\_ Instructor Name: \_\_\_\_\_

(Advanced & Tricky MCQs – Real Interview Style)

## 1 What does CSS stand for?

- A) Creative Style Sheets
  - B) Computer Styled Sections
  - C) Cascading Style Sheets
  - D) Colorful Style Syntax
- 

## 2 ☐ Which selector has highest specificity?

- A) `div`
  - B) `.class`
  - C) `#id`
  - D) `*`
- 

## 3 ☐ What does “cascading” mean in CSS?

- A) Colors fall automatically
  - B) Styles apply randomly
  - C) Priority system decides which rule applies
  - D) Browser chooses fastest style
- 

## 4 ☐ Which property makes text bold?

- A) `text-weight`
- B) `font-weight`
- C) `text-style`
- D) `bold-text`

**5 ☐ What is default position value?**

- A) absolute
  - B) relative
  - C) static
  - D) fixed
- 

**6 ☐ Which property controls space inside an element?**

- A) margin
  - B) padding
  - C) border
  - D) spacing
- 

**7 ☐ What is specificity of: `#header .nav ul li a` ?**

- A) 1-1-3
  - B) 1-1-4
  - C) 1-2-3
  - D) 0-1-4
- 

**8 ☐ `display: none;` does what?**

- A) Hides element but keeps space
  - B) Removes element completely from layout
  - C) Makes it transparent
  - D) Moves it off-screen
- 

**9 ☐ `visibility: hidden;` does what?**

- A) Removes from layout
  - B) Hides but keeps space
  - C) Deletes element
  - D) Makes it opacity 0
-

## 10 Which unit is relative?

- A) px
  - B) cm
  - C) em
  - D) pt
- 

## 11 ☐ What does `box-sizing: border-box;` do?

- A) Removes border
  - B) Includes padding & border inside width
  - C) Doubles width
  - D) Makes box flexible
- 

## 12 ☐ Which property is used for Flexbox?

- A) `display: flex;`
  - B) `position: flex;`
  - C) `layout: flex;`
  - D) `float: flex;`
- 

## 13 ☐ In Flexbox, which aligns items vertically (default row)?

- A) `justify-content`
  - B) `align-items`
  - C) `text-align`
  - D) `align-text`
- 

## 14 What happens if two CSS rules have same specificity?

- A) First one wins
  - B) Random
  - C) Last one wins
  - D) Browser error
-

**15** ☐ **What does `z-index` control?**

- A) Zoom level
  - B) Layer stacking order
  - C) Font size
  - D) Opacity
- 

**16** ☐ **What is difference between inline, block & inline-block?**

- A) Only visual
  - B) Affects layout flow behavior
  - C) No difference
  - D) Only margin changes
- 

**17** ☐ **What is specificity order (highest first)?**

- A) element > class > id
  - B) id > class > element
  - C) class > id > element
  - D) universal > id > class
- 

**18** ☐ **Which property adds shadow to text?**

- A) `font-shadow`
  - B) `text-shadow`
  - C) `shadow-text`
  - D) `box-shadow`
- 

**19** ☐ **What does `overflow: hidden;` do?**

- A) Expands element
  - B) Hides overflowing content
  - C) Adds scroll
  - D) Makes transparent
-

## 20 ☐ Why use CSS variables?

- A) For JavaScript only
  - B) For reusable dynamic values
  - C) For speed
  - D) For grid
- 

## 21 What is default `position` context for absolute element?

- A) nearest positioned ancestor
  - B) body always
  - C) viewport
  - D) parent always
- 

## 22 ☐ Which media query is correct?

- A) `@media screen and (max-width: 768px)`
  - B) `@media width < 768`
  - C) `@screen media 768px`
  - D) `media-query(768)`
- 

## 23 ☐ What does `transition` do?

- A) Animates between property changes
  - B) Moves element
  - C) Reloads page
  - D) Delays CSS loading
- 

## 24 ☐ Which property rotates element?

- A) `rotate`
  - B) `transform`
  - C) `spin`
  - D) `move`
-

**25** ☐ **What does `opacity: 0;` do?**

- A) Removes element
  - B) Makes invisible but keeps space
  - C) Deletes CSS
  - D) Moves behind screen
- 

**26** ☐ **Which is NOT valid position value?**

- A) static
  - B) relative
  - C) fixed
  - D) center
- 

**27** ☐ **What does `flex-wrap: wrap;` do?**

- A) Breaks CSS
  - B) Moves to new line when needed
  - C) Hides overflow
  - D) Fixes width
- 

**28** ☐ **Which property controls background image size?**

- A) background-fit
  - B) background-size
  - C) image-size
  - D) bg-scale
- 

**29** ☐ **What is `rem` based on?**

- A) Parent font size
  - B) Root (html) font size
  - C) Browser zoom
  - D) Body width
-
